AIMS Caseload Tracker with EHR Interoperability

The AIMS Caseload Tracker with Electronic Health Record (EHR) Interoperability is a secure web-based registry for managing behavioral health caseloads in integrated care settings. Real-time clinical data is read from your EHR, standardized using an integration engine, and displayed within the AIMS Caseload Tracker user interface. This registry application is used alongside your EHR to provide the same powerful tracking and reporting functions found in our basic version of the AIMS Caseload Tracker.

Compared to the basic AIMS Caseload Tracker, this version eliminates the double-documentation burden for clinicians and ensures accurate and up-to-date information is available across the care team. Additional clinical and technical staff time is required to establish the data connection, and some sites choose to license the basic version of the AIMS Caseload Tracker while working to establish interoperability.

EHR Compatibility
The AIMS Caseload Tracker is compatible with most EHRs using the best connection type available, whether it be HL7, FHIR or APIs. Our successful pilot sites have used Athena, NextGen and Cerner, and we look forward to adding to that list. Our EHR integration partner has expertise working with Epic, Meditech and many more. Please contact us to learn more if your EHR is not listed here.

Time to Launch
We will work closely with your team on scoping and feasibility prior to a formal project kickoff. Once integration work begins, the typical project takes 4-6 weeks, but this can vary depending on the capacity of your technical team.

2021 Pricing
Health care organizations can license the AIMS Caseload Tracker from the University of Washington for an annual fee that covers hosting, maintenance, and training on how to use the application. Your organization is responsible for any fees that may be imposed by your EHR vendor.

Number of Users *	2021 Annual License Fee
1-5	$6,500 per year
6-30	$10,000 per year
31-50	$15,000 per year
51-100	$20,000 per year
Users typically include behavioral health providers, care managers, psychiatry providers, behavioral health supervisors and other administrators.	

Get Started
The AIMS Center will work closely with your clinic and technical team to complete a data integration plan and technical feasibility assessment prior to kicking off. A project roadmap is available to provide an overview of the process. Please email aimstech@uw.edu to learn more.
