

Integrated Care Fellowship

Patient-centered, high-quality mental health care requires providers to focus on population health. Our Integrated Care Fellowship at the University of Washington prepares fellows for population-based health care by providing information on health care systems, defining roles within these systems, and developing skills that contribute to better mental health outcomes.

Participants in this program will develop the skills needed to provide effective mental healthcare to a variety of populations, such as:

- Leadership
- Health Care Systems
- Clinical

Trainees can customize their experience and focus on specific clinical conditions or populations (such as Pediatrics or Perinatal).

Training activities will include:

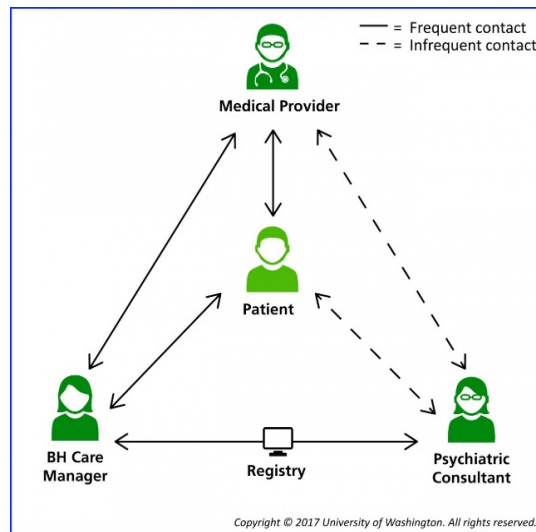

- Clinical rotations in Collaborative Care model and other consultation models
- Learning about quality improvement in health care and doing a project with supervision
- More in depth knowledge about Telepsychiatry and using it to provide care in different integrated care models
- Didactic series focusing on clinical and system-based topics on population-based care

“The ICTP fellowship led me to consider population-based health on a deeper level. I improved my clinical skills in primary care psychiatry issues and learned to better analyze systems-based barriers and gaps in mental healthcare.

After completing the fellowship, I have felt better prepared to help create integrated care solutions on a clinic- and systems-wide level. My fellowship experience has also led my colleagues to seek out my help on these issues, probably to a greater degree than if I did not have this formal training experience.”

- Sara Haack, MD, MPH, 2016-17 Integrated Care Fellowship Graduate

2022 – 2023 Integrated Care Fellowship Application

REQUIREMENTS

Completion of an ACGME-accredited psychiatry residency training no later than July 1, 2022.

APPLICATION INFORMATION

Application materials are available at ictp.uw.edu/apply

APPLICATIONS DUE

January 31, 2022
